Project Sidewalk is a free, online tool that allows users to label sidewalk infrastructure and identify accessibility barriers by visually walking/rolling through community streets using Google Street View imagery. Project Sidewalk is a crowdsourcing platform that community members can voluntarily participate in to map out sidewalk conditions and accessibility concerns.

Project Sidewalk data is open source that can be utilized to identify specific sidewalks that are in need of repair, along with broader trends in sidewalk conditions throughout Knox County.

The Project Sidewalk team collaborates with community groups, local government, youth organizations and civic programs to teach community members how to use the sidewalk mapping tool.

If you're an individual interested in accessing the Project Sidewalk tool, click here.
